Regulations Are Tightening, And Costs Are Rising

With no practical alternative to fossil fuels, shipping companies face rising costs and stricter emissions controls.

- IMO CII Ratings: Poor scores mean operational restrictions.
- EU ETS: 40% emissions coverage in 2025 → 70% in 2026 → 100% by 2027.
- FuelEU Maritime: Ships must hit carbon targets or face financial penalties.
- Expanding ECAs: Stricter limits on SOx and NOx.

Sulnox is the fastest, simplest way to cut fuel costs and emissions - no investment, no retrofits, no drydocking, no waiting for new fuels.

Why Shipowners Are Adopting Sulnox Eco

Applicable across all liquid hydrocarbon fuels (HSFO, VLSFO, MGO/MDO, Biofuel) and all vessel types and engine sizes.

Sulnox Eco fuel conditioner is an organic, drop-in solution for more complete combustion and improved engine function.

\$ Fuel Savings

5% average savings.
c.300% ROI in weeks.

Lower Emissions

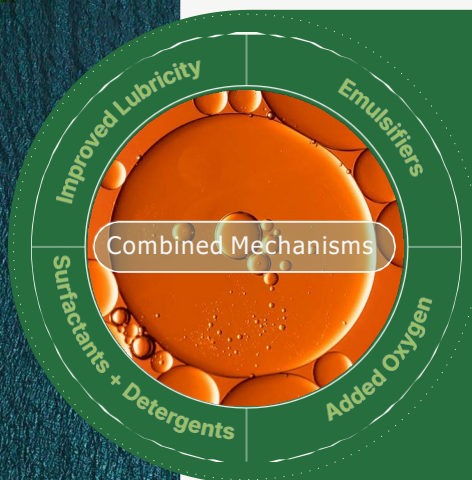

c.90% particulate reduction
& lower CO₂, NO_x and SO_x.

Cleaner Engines

Removes carbon deposits,
improving efficiency.

Zero CAPEX

Just a 1:2000 dosing rate -
simply added when bunkering.

How it works:

Emulsification.
Emulsification technology enhances combustion efficiency.

Detergency.
Gently cleans and decarbonizes engine components.

Improved lubricity.
Reduces friction, lowering wear and maintenance costs.

"Expanding SulNOxEco across our fleet was an easy decision. It's a self-funding solution that delivers tangible fuel savings, cleaner engines and supports our broader efficiency and sustainability goals."

Sachin Saharawat. *Technical Director. Eastern Pacific Shipping.*

Adopting across
30+ vessels
and invested.
